3 Year	10.41%	9.06%
Since Inception	6.42%	7.18%

Inception Date: 11/18/14

All returns greater than one year are annualized. The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost, and current performance may be lower or higher than the performance quoted. For performance data current to the last month end, please call 1-866-777-8227. Fee waivers are contractual and are in effect until March 1, 2020. Absent these waivers, total return would be reduced.

The Fund charges a 2.00% redemption fee on redemptions of shares held for less than 180 days. Your return will be lower if a redemption fee is applied to your account.

To determine if this Fund is an appropriate investment for you, carefully consider the Fund's investment objectives, risk factors, charges and expenses before investing. This and other information can be found in the Fund's full or summary prospectus, which may be obtained by calling 1-866-777-8227. Read the prospectus carefully before investing or sending money.

Mutual fund investing involves risk, including the possible loss of principal. In addition to the normal risks associated with investing, investments in smaller companies typically exhibit higher volatility and international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Emerging markets involved heightened risks related to the same factors as well as increased volatility and lower trading volume. There can be no assurance that the Fund will achieve its stated objectives. The Cambiar International Small Cap Fund is distributed by SEI Investments Distribution Co., which is not affiliated with Cambiar or any of its affiliates.

The MSCI EAFE Small Cap Index is an unmanaged index compiled by Morgan Stanley Capital International. Index returns do not reflect any management fees, transaction costs, or expenses. Individuals cannot invest directly in an Index.

©2019 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. CAMFX was rated against 92 Foreign Small/Mid Blend funds over a three year period. With respect to these Foreign Small/Mid Blend funds CAMFX received a rating of 5 stars. Past performance is no guarantee of future results.

¹AUS (assets under supervision) includes UMA/model portfolios that are non-discretionary assets. Risk statistic definitions are as follows: Alpha is a measure of risk-adjusted performance. Beta is a measure of risk in relation to the market or benchmark. The Sharpe Ratio is a direct measure of reward-to-risk and is calculated by subtracting the risk free rate from the rate of return for a portfolio and dividing the result by the standard deviation. Standard Deviation is a statistical measure of historical volatility; a measure of the extent to which numbers are spread around their average. R-Squared measures how closely a portfolio's performance correlates with the performance of a benchmark index. Risk statistics are based off a three year time frame. P/E ratio 1 YR Forecast is a calculation that divides the current share price by the estimates of earnings in the next four quarters. Debt/Equity - Long Term is a calculation that takes interest bearing, long-term debt divided by shareholder equity. EPS Growth - Long Term is a calculation that takes the company's estimated profits for five years divided by the outstanding shares. These calculations are not a forecast of the Fund's future performance. The projected ratios, risk statistics, and country allocations are based upon third party sources that are deemed to be reliable; however, Cambiar does not guarantee its accuracy or completeness.
